Lab 4 Evidence Report

Final regression, E2E, accessibility and visual evidence

Issue #61 | Branch: feature/lab4-8-e2e-visual | Evidence date: 2026-10-13

This is a branch-evidence draft based on lab4-staging at merge commit 1f558d05a898dd66952bffb652cb829d52b6b6fe. It is not a final release report: Issue #61 is not yet merged, and manual accessibility sign-off remains open.

Issue #61 on GitHub

Answer Part 1

Git use with engineering workflow

The current feature branch starts from the merged lab4-staging head **1f558d05**. The Lab 4 increment was delivered through reviewed, merged pull requests #63-#69:

- PR #63 - contract; merged into lab4-staging.
- PR #64 - Actions foundation; merged into lab4-staging.
- PR #65 - Actions API; merged into lab4-staging.
- PR #66 - Ticket workflow; merged into lab4-staging.
- PR #67 - Actions UI; merged into lab4-staging.
- PR #68 - Staff Dashboard; merged into lab4-staging.
- PR #69 - Requester Dashboard; merged into lab4-staging.

The PR history and peer identities are reconciled in docs/lab-04/reviewer.md. PR #68 and #69 were approved by YummieGG before merge. Issue #61 itself remains an unmerged feature branch; no PR or peer approval is claimed.

Answer Part 2

Specification-driven and test-driven work

The Lab 4 contract maps 23 acceptance criteria in both directions to test IDs. This increment validates public HTTP routes, rendered interactions and real role-based journeys. Server and browser fixtures run against disposable PostgreSQL databases; the local demo database is not seeded or reset.

- The regression exposed stale Lab 2/3 route and fixture assumptions and an actual 768px navigation overflow; the tests were adapted without removing coverage.

- The final Ticket workflow E2E caught a missing screenshot target on the Staff page. The selector was corrected and capture now checks the supplied Playwright locator before scrolling.

- The Client TicketWorkflow component test covers summary validation and ACTION_RESULT_REQUIRED feedback only; it does not claim to cover resolve/reopen or stale replay behavior.

The current mapping, evidence table and explicit remaining Planned rows are in docs/lab-04/tests.md.

Answer Part 3

Regression and verification results

Command / suite	Result
Isolated Server tests	21 files; 364/364 passed
Client tests	24 files; 197/197 passed
Lab 4 Playwright	18/18 Chromium journeys passed; disposable DB
Lab 2/3 Playwright regression	13/13 journeys passed; justified route/fixture adaptations
Client lint and Server/Client builds	Passed
Repository check	Failed: 54 formatter diagnostics across 157 files (includes CRLF/LF normalization); no broad rewrite

The run outputs reported no skipped Lab 4 E2E cases. Migration preservation, repeat seed and backup/restore are documented as disposable-database evidence in M4-01/M4-02. Performance evidence for both dashboards is recorded in P4-01.

> These results are from the feature branch, not an integrated main run.

Answer Part 4

AI use and reflection

OpenAI Codex (GPT-5 and GPT-6) assisted with the contract, review consistency, implementation and evidence checks. The AI-use log records nine selected key prompts and the required reflection; it does not add Co-Authored-By attribution.

Reflection

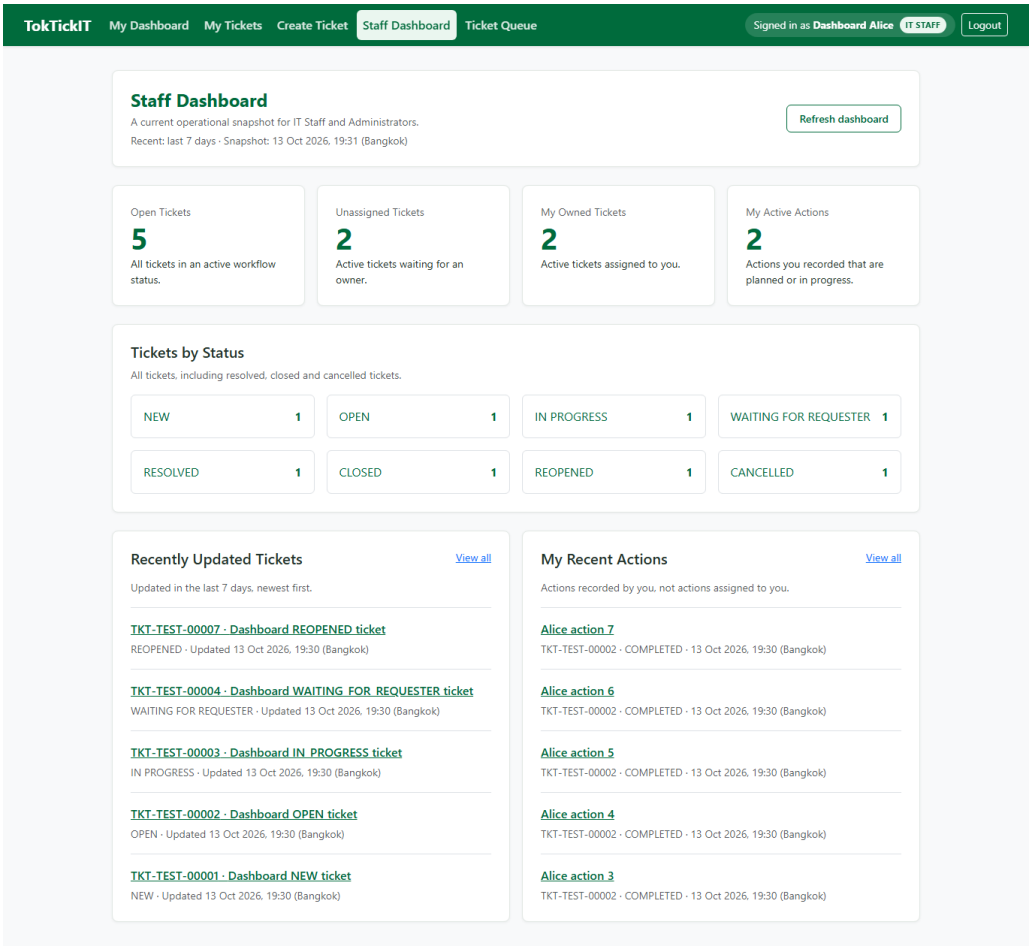

The most effective use of AI in this lab was turning ambiguous requirements into explicit decisions, then asking for a separate cross-document consistency check before implementation. Peer review and browser evidence supplied a different validation layer: the reviewer found issues that the planning and implementation passes did not, while the E2E run verified the real role-based flows at the required viewports. I made the final scope and release decision, reviewed the changes, and ran the verification commands myself.

Open the Lab 4 AI-use log.

Answer Part 5

Working IT Staff Dashboard

The Staff Dashboard shows authoritative seven-day metrics, all workflow status groups, recent Ticket updates and the current user's performed Actions. Drill-downs preserve filters and stable time bounds; the UI uses Bangkok display time.

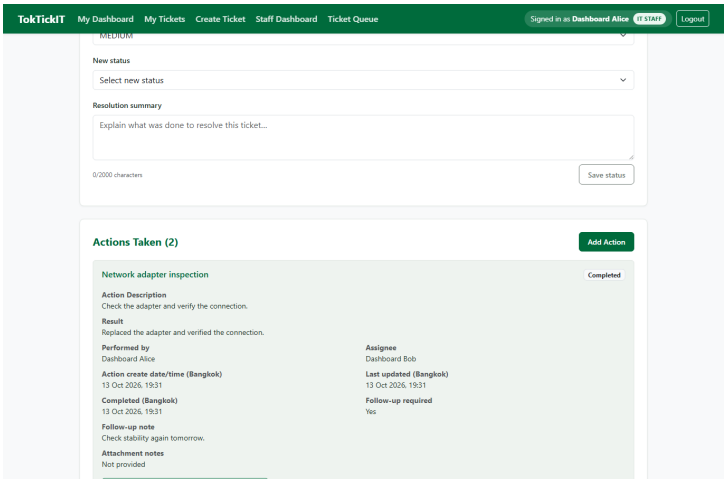

Staff Dashboard: populated desktop evidence (1366px viewport).

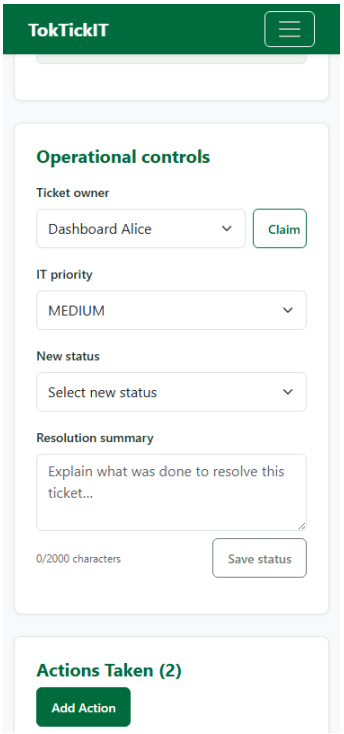

Answer Part 6

Working Actions Taken UI

Staff and Administrators can create and update work records; the original performer remains distinct from the optional assignee. Requesters receive read-only history. Validation, inactive-assignee rejection, completion/cancellation and audit history are covered by the E2E flow.

Completed action details at desktop width.

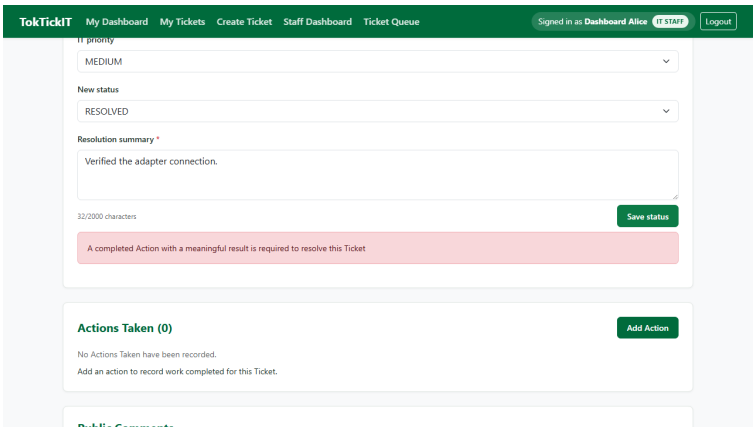

Completed action details at 375px viewport.

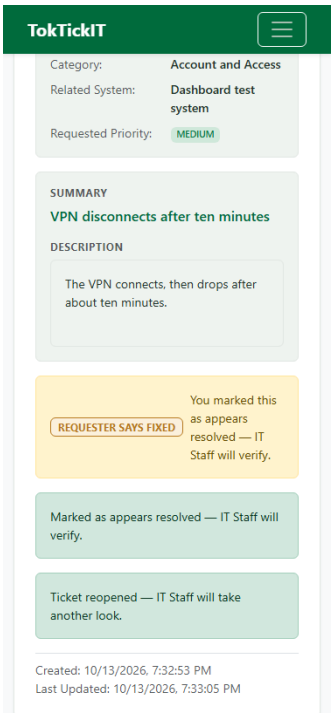

Answer Part 7

Working Ticket workflow

Resolution is rejected until a completed Action has a meaningful result. Once resolved, the Requester sees public evidence, can reopen the Ticket and can record an advisory 'appears resolved' signal without changing workflow status. Internal notes stay private.

Staff resolution gate and safe validation feedback.

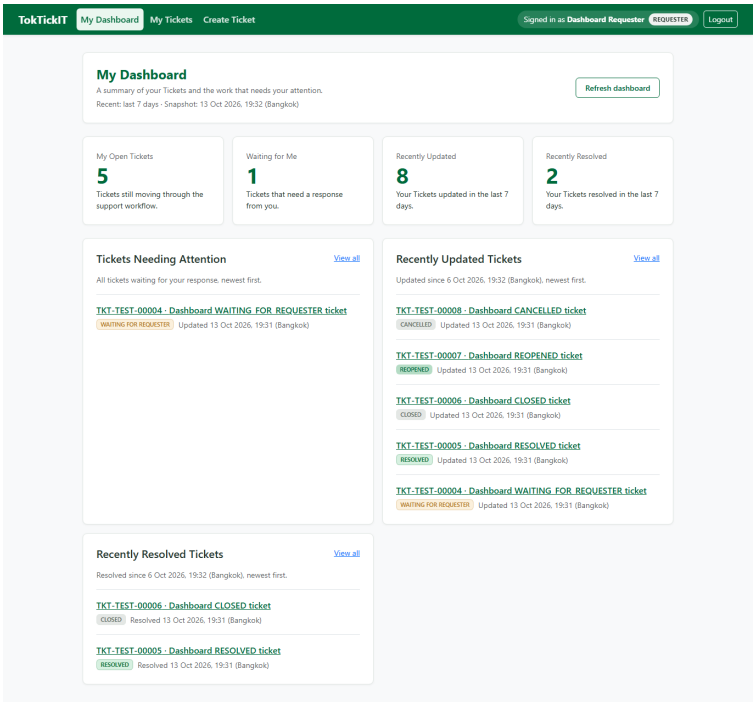

Requester reopen and advisory feedback at mobile width.

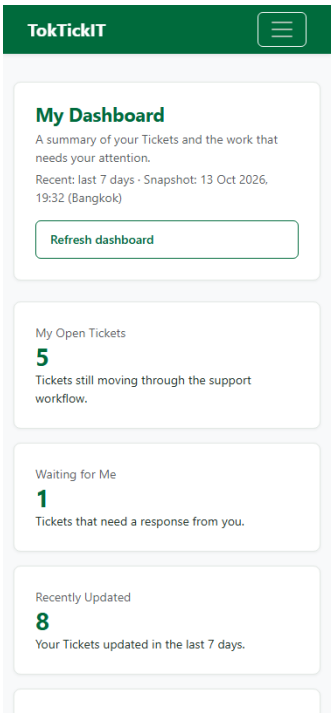

Answer Part 8

Working Requester Dashboard and final regression

The Requester Dashboard is scoped to the signed-in owner and presents current counts, waiting work and recent updates. My Tickets preserves filters and page state through refresh, detail return and browser Back. Lab 2/3 authentication, ticket, attachment, comment/note, queue/detail and Admin regressions ran without skipping tests; fixture and route adaptations are recorded in the test plan.

Requester Dashboard at desktop size.

Requester Dashboard at 375px viewport.

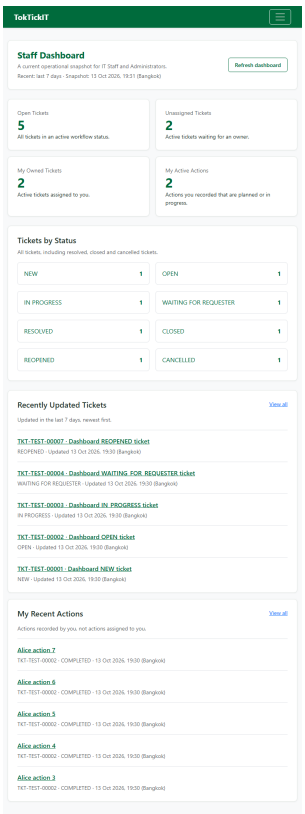

Answer Part 9

Zen Green UI, responsive layout, accessibility and final polish

The screenshots show the shared Zen Green shell, consistent status treatment and responsive Staff, Requester, Actions Taken and Ticket workflow screens. Automated assertions cover semantic labels, keyboard focus for tested flows, validation placement, mobile targets and horizontal overflow. The Lab 3 navigation now collapses before the 768px tablet viewport, fixing a reproduced overflow.

- Still pending manual sign-off: full-resolution review of every figure, contrast and non-color status meaning, keyboard-only traversal, and screen-reader behavior.

- The final integrated-main run, Issue #61 peer review and release decision remain pending. This draft does not claim Issue #61 completion on main.

Staff Dashboard tablet evidence (768px viewport).

Checklist status

Automated evidence is checked in docs/lab-04/visual-accessibility-checklist.md. Manual contrast, keyboard-only, screen-reader and integrated-main checks remain open.
